Rehabilitation of the Haffir Dams in Ceel Xume and Beerato

1. Organizational overview:

ActionAid International Somaliland (AAIS) is part of a global federation working to end poverty and injustice with thousands of communities and millions of people across the planet guided by its strategy 'Action for global Justice' that ensures coherence, aligning with the poor and excluded people, reasserting women's rights, strengthening accountability, and building resilience against shocks & hazards. AAIS has been operating in Somaliland for over 28 years, implementing integrated programs on women's rights, humanitarian response, resilience building, food security, and education. AAIS implements several protection programs through its engagement with communities, women, and youth groups, with the goal of empowering them and ensuring safe spaces for them within their communities and providing referral pathways for the survivors of violence.

2. Project Background

The impact of La Niña conditions will likely be imminent in early and mid-2025 in Somaliland with most likely affected being Somaliland. Agro-pastoral communities are projected to experience escalated food insecurity due to reduced productivity and limited income avenues. This may severely destabilize recent gains made through humanitarian interventions. La Niña is expected to intensify drought conditions, further limiting access to water and food, particularly in remote, underserved areas with restricted infrastructure. This scarcity will likely heighten hardship and deepen dependency on external support among already vulnerable populations.

Implementing early livelihood interventions before, during, and after the drought period will strengthen community capacity, address immediate and medium-term needs, and most importantly mitigate rural-urban migration.

Hence, ActionAid in collaboration with WFP is implementing the Early Recovery Project in Odweine district targeting 2,090 HHs of 12,542 Bens, duration of the project will be 5 Months (March to July 2025). In this project, AAIS is going to rehabilitate two Haffir dams: 1- Ceel Xume Haffir Dam and 2- Beerato Haffir Dam.

3. Work Scope:

To ensure easy access to equitable and clean water for rural communities facing a severe water shortage. ActionAid International Somaliland intends to implement the rehabilitation of the Haffir dam in Ceel Xume and Beerato villages in Odwayne District.

No	Summary Activity Description	Quantity	Ceel Xume	Beerato
1	Rehabilitation of one Haffir dam and construction of silt-trap with intake canals, overflow canal, rip-rap structure over the end-lanes of over-flow and intake canals.	1	X	X
2	Supply and installation of geo-membrane plastic linear HDPE 1.5 mm over the bed of the Haffir Dam	1	X	X
3	Supply and mounting one submersible pump supported by PV Solar panels connected to Haffir dam through piped conduit.	1	X	X

For further information, the following are incorporated with this tender:

- ♣ The attached BoQ.

5

- ♣ Construction drawings.
- ♣ Technical specification.
